

## Last Chance To See?

Lakshadweep, a hundred thousand islands with white sands and aqua blue seas all around, is a place of great marine diversity and breath-taking aesthetic beauty. With over a hundred species of corals, shells, slugs, star fishes, sea cucumbers, crabs, shrimps, fishes, and turtles of every perceptible colour, Lakshadweep has been contributing to combat climate crisis as well as being a paradise!

Times are changing real quick!  
Will it be allowed to continue to combat the climate crisis and remain a paradise?
