

CHECKLIST OF THE REPTILES IN INDIA WITH REGARD TO THE WILDLIFE PROTECTION ACT

Many readers are aware that Zoo Outreach Organisation/CBSG, India is in the process of conducting seven Conservation Assessment and Management Plan Workshops for a very wide range of species (both plant and animal) in India. One of the first tasks related to the Workshops is to find the BEST checklist of species of the group that is being assessed, and either try to assess all species in the list or make a selection on the basis of endemism, use, trade, etc.

The checklist of Reptiles in India, compiled by Indraneil Das and Harry Andrews, contains 501 species. For sake of interest we asked Coimbatore Zoo friends Brij Gupta and S. Rathanasabathy to redraw the checklist using the Wildlife Protection Act, 1991 as a reference. The result may be useful to some of our readers.

The distribution of each species is given after the scientific name which indicates whether it is endemic. To quickly find endemic species, look for one asterisk*. Non-endemics have two asterisks **. For other varieties of the list, e.g. Endemics and non-endemics and a list of Indian Reptiles listed in the Red Data book, order the Briefing Book for the Reptile CAMP.

Included in the Wildlife (Protection) Act, (1972) amended (1991)

SCHEDULE I [Part 1]
